Sadman Ishraq Mohiuddin

Senior Business Analyst | Operations Strategy | Process
Improvement | Data Analytics | Platform & Market Operations | Cloud
Transformation | Requirements Engineering | Montreal
Montreal, Quebec, Canada

Summary

I am a Senior Business Analyst focused on enterprise technology delivery, operations strategy, & data driven decision making across large scale systems. My work sits at the intersection of business analysis, process improvement, & operational analytics, helping organizations translate complex operational challenges into structured systems, scalable platforms, & measurable outcomes. I began my career as a Mechanical Engineer at ExxonMobil, delivering engineering analysis across 40+ global refinery & chemical sites & contributing to a \$3M refinery retrofit project in highly regulated industrial environments. I later transitioned into IT business analysis and enterprise platform delivery, working across industries including banking, fintech, healthcare, logistics, renewable energy, government systems, & digital platforms. Initiatives include: • Leading business analysis & requirements engineering for a large scale enterprise cloud transformation program at a major Canadian financial institution, supporting modernization initiatives impacting ~30,000 users. • Delivering process mapping, system design, & stakeholder coordination for the Electronic Fiscal Device Management System (EFDMS), a national fiscal compliance platform supporting 30,000+ retail outlets with infrastructure designed to scale to 600,000+ devices nationwide. • Contributing to development of enterprise platforms including healthcare management systems, EV charging network management platforms, AI driven accounting research systems interpreting International Financial Reporting Standards (IFRS), and enterprise CRM platforms. • Scaling a digital healthcare logistics platform processing 14,000+ orders, generating ~\$150K cumulative revenue, building a 40+ partner pharmacy network, & implementing operational analytics to improve fulfilment performance & delivery reliability. • Leading a ~200 person engineering & field operations team deploying solar infrastructure across 247 sites and ~800 solar powered irrigation

systems, supporting renewable energy expansion & rural infrastructure development. Core work typically involves: Business Analysis • Requirements Engineering • Business Process Analysis • Process Mapping • Stakeholder Management • Operational Strategy • Data Analysis (SQL, Excel, Power BI) • Operational Analytics • Enterprise System Delivery • Platform Operations I am particularly interested in Senior Business Analyst, Operations Analyst, & consulting style roles where complex systems, cross functional teams, & data driven decision making intersect.

Experience

AANNEX SOLUTION INC

Senior Business Analyst

October 2025 - Present (7 months)

Canada & Bangladesh

- Lead end-to-end business analysis and requirements engineering for a large-scale enterprise cloud transformation program at a major Canadian financial institution, supporting modernization initiatives impacting ~30,000 users.
- Conduct stakeholder discovery, requirements elicitation workshops, and solution design sessions across cloud engineering, DevOps, infrastructure, security, and enterprise architecture teams.
- Perform AS-IS / TO-BE analysis and enterprise system impact assessments supporting migration of legacy Exchange environments to Microsoft 365 SaaS platforms across enterprise collaboration environments.
- Support phased rollout of Microsoft Teams, OneDrive, Microsoft Rooms, and Copilot, defining business requirements, adoption strategies, and enterprise SaaS licensing models across a 30,000-seat environment.
- Drive requirements for migration of legacy on-premise infrastructure to Microsoft Azure (Canada Central / Canada East) including modernization of multi-tier end-of-life enterprise applications.
- Collaborate with engineering teams implementing Infrastructure as Code (IaC) and cloud adoption frameworks to enable scalable deployment automation and cloud-native platform architectures.

- Document enterprise architecture, system dependencies, API integrations, and data migration pathways, supporting transition of Oracle database workloads to Azure SQL environments.
- Partner with architecture and security teams to define FinOps governance models, identity and access management (IAM) controls, and Web Application Firewall (WAF) security requirements aligned with enterprise risk and regulatory standards.

ARBREE LIMITED

5 years 1 month

Senior Business Analyst

March 2022 - October 2025 (3 years 8 months)

Dhaka, Bangladesh

- Led business analysis, requirements engineering & stakeholder management across enterprise software platforms spanning banking, fintech, healthcare, government, EV infrastructure, logistics & e-commerce sectors
- Conducted system analysis, stakeholder workshops, process mapping (BPMN) & solution design translating business needs into functional specifications & structured platform architectures
- Wrote SQL queries (SELECT, JOIN, aggregations, data cleaning) to analyze datasets & validate system outputs during platform development
- Produced UML architecture diagrams & system workflows using Visio & Lucidchart to guide engineering teams
- Coordinated Agile delivery (Scrum/Kanban) across teams, managing sprint planning, backlog prioritization & release timelines
- Led User Acceptance Testing (UAT), QA validation & defect resolution ensuring systems met functional & operational requirements
- Led requirements management, stakeholder coordination & delivery oversight for the Electronic Fiscal Device Management System (EFDMS) supporting 30,000+ retail outlets with infrastructure designed to scale to 600,000+ devices nationwide

- Drove business process improvement & cross-functional collaboration between stakeholders, engineers & QA teams delivering scalable enterprise platforms

EFDMS

Government fiscal compliance platform supporting 30,000+ retail outlets with infrastructure designed to scale to 600,000+ devices nationwide

IFRS AI Accounting Research Assistant

AI system retrieving & interpreting International Financial Reporting Standards (IFRS)

ENT Hospital Management System

Healthcare ERP platform managing patient records, billing & clinical operations

EV (Mercedes-Benz) Charging Network Management Platform

Software platform monitoring charging stations, usage analytics & payment transactions

Enterprise CRM & Property Management Platform

Real estate platform managing leads, bookings & transaction workflows

Business Analyst & QA Lead

October 2020 - March 2022 (1 year 6 months)

Kuwait & Bangladesh

- Led requirements engineering and stakeholder workshops for enterprise software platforms across healthcare, logistics, fintech, and real estate sectors.
- Produced functional specifications, user stories, and system documentation translating business requirements into structured development tasks for engineering teams.
- Designed process maps, system workflows, and platform architecture diagrams using Lucidchart and Microsoft Visio to guide platform implementation.

- Coordinated closely with developers and product stakeholders to refine feature requirements, system logic, integrations, and platform functionality during development.
- Supported Agile delivery using Scrum and Kanban workflows in Jira, assisting with sprint planning, backlog prioritization, and release coordination.
- Monitored delivery timelines through Gantt-based project tracking, coordinating multiple parallel software initiatives and cross-functional development teams.
- Managed quality assurance processes including test case design, functional testing, defect tracking, and validation of system requirements.
- Led User Acceptance Testing (UAT) with business stakeholders, validating delivered systems against operational workflows and documented requirements.

Aamar Pharma Limited

Head of Operations & Strategy

July 2022 - January 2024 (1 year 7 months)

Dhaka, Bangladesh

Led operations and platform development for a digital healthcare logistics startup in Dhaka, supporting 14,000+ completed orders, ~\$150K cumulative revenue, and ~70% customer retention through an aggregated pharmacy delivery platform.

- Supported 43% average year-over-year revenue growth (2021–2023) through operational improvements, partner expansion, and platform scaling.
- Contributed to 48% average year-over-year customer growth, expanding the active user base to 526+ customers across the Dhaka service area.
- Built Excel-based financial forecasting and demand projection models using scenario modelling and sensitivity analysis to evaluate pricing strategy, unit economics, order growth, operational scaling, and pharmacy network expansion.
- Developed Power BI dashboards to monitor order volumes, medicine demand trends, delivery performance, and customer activity.

- Used SQL and Excel-based KPI tracking to analyze medicine demand patterns, identify high-volume products, and optimize pharmacy sourcing and fulfillment workflows.
- Implemented structured operational data capture across 23+ data points per order, enabling data-driven decision-making, logistics optimization, and performance analytics.
- Built and managed a 40+ partner pharmacy network, enabling a distributed asset-light inventory model that improved medicine availability and supply chain reliability.
- Oversaw platform operations achieving ~74-minute average delivery time (~18% faster than the 90-minute SLA), improving last-mile logistics efficiency and service reliability across Dhaka.
- Designed and implemented the end-to-end fulfillment process spanning order intake, prescription verification, pharmacy sourcing, dispatch coordination, and last-mile delivery logistics.
- Contributed to the development of proprietary systems including an Order Management System (OMS), B2C ordering platform, and early B2B integrations supporting pharmacies and healthcare providers.

Solargao Limited

Engineering Team Lead

March 2020 - August 2020 (6 months)

Dhaka, Bangladesh

- Led a multidisciplinary engineering and field operations team of ~200 personnel supporting the deployment of over 18 MW of solar energy infrastructure across Bangladesh, contributing to projects spanning 247 solar sites and nearly 800 solar-powered irrigation systems.
- Analyzed rural energy access gaps, irrigation demand, and solar infrastructure deployment patterns, supporting implementation strategies that expanded renewable energy adoption across rural agricultural installations.

- Supported the rollout of agent banking and mobile financial services in collaboration with the Asian Development Bank (ADB), enabling microloans to rural farmers to finance solar-powered irrigation systems.
- Analyzed satellite and geospatial datasets using ArcGIS to identify optimal solar installation locations and support planning of renewable energy infrastructure across rural regions.
- Directed project scoping, engineering documentation, and technical design planning for renewable energy initiatives including solar irrigation systems, solar mini-grids, and hybrid solar-diesel power stations.
- Coordinated with government agencies, engineers, and local stakeholders to align solar infrastructure deployment with rural electrification initiatives and regulatory requirements.

ARBREE LIMITED

3 years 4 months

Business Analyst

April 2018 - February 2020 (1 year 11 months)

Dhaka, Bangladesh

- Conducted business analysis and requirements engineering for digital platforms across sectors including healthcare, fintech, logistics, and real estate.
- Led stakeholder interviews, requirement workshops, and requirements gathering sessions to identify business needs, operational workflows, and system objectives.
- Developed functional specifications, user stories, use cases, and business requirement documents (BRDs) translating business requirements into structured documentation for development teams.
- Produced process maps, workflow diagrams, and system models using Lucidchart and Microsoft Visio to define platform logic and operational processes.
- Performed business process mapping and operational analysis to identify inefficiencies and design improved digital workflows.

- Developed SOP documentation, RACI matrices, and project documentation clarifying responsibilities, governance structures, and operational procedures for digital platforms.

- Documented system requirements, feature roadmaps, and technical specifications supporting platform planning, implementation, and product development.

- Assisted in project coordination, milestone tracking, and delivery planning, ensuring development activities aligned with documented requirements and project objectives.

Digital Solutions Analyst

November 2016 - March 2018 (1 year 5 months)

Bangladesh & United Kingdom

- Conducted market research and competitive analysis to evaluate opportunities for emerging technology products and digital platforms across sectors including fintech, healthcare, logistics, and real estate.

- Performed requirements analysis and requirements gathering to translate early product concepts into structured business requirements, functional requirements, and initial product specifications.

- Analyzed user needs, operational workflows, and business processes to support product strategy, platform feasibility assessments, and early-stage solution planning.

- Performed exploratory data analysis to identify market trends, demand signals, and operational constraints across target industries.

- Developed product requirement documents (PRDs), feature roadmaps, and workflow documentation outlining proposed system logic for potential software platforms.

- Produced process maps, use cases, and conceptual system workflows using tools such as Visio and Lucidchart to support early solution design discussions.

- Documented user scenarios, system requirements, and business use cases supporting internal evaluation of potential digital products.

- Collaborated with internal stakeholders through stakeholder interviews and requirement discussions to refine product ideas and platform concepts prior to technical development.

ExxonMobil Corporation

Mechanical Engineer (Fixed Equipment)

September 2015 - September 2016 (1 year 1 month)

Kuala Lumpur

- Conducted quarterly operational performance, incident, & reliability trend analysis across 40+ refining, chemical, & synergy sites in North and South America, using Excel & Tableau. Findings were presented directly to refining & chemicals leadership & used to inform multi-million dollar operational & capital allocation decisions
- Led engineering analysis - MSOT integrity program evaluating 100+ refinery assets. Coordinated engineers across Asia, Europe, & North America in a continuous 24-hour workflow model, delivering the project \$50K under a \$300K budget
- Authored the Mechanical Design Specification (M-Spec) for a kerosene hydrotreating reactor catalyst bed retrofit (~\$3M capital project), defining mechanical design requirements, operating conditions, & integrity standards
- Delivered 25+ engineering analysis assignments across refinery equipment integrity, piping systems, & process units supporting ExxonMobil's global operations
- Performed piping integrity, flow restriction, vibration, & fatigue analysis supporting ExxonMobil's proprietary SCANfining™ (Selective Catalytic Naphtha Hydrofining) process units
- Conducted fitness-for-service evaluations & mechanical integrity assessments for refinery assets including pressure vessels, heat exchangers, towers, tanks, & piping systems using API & ASME codes with engineering tools such as PV Elite and CAESAR II
- Developed internal Excel-based engineering calculation tools automating analysis derived from API & ASME standards

- Updated & contributed to global engineering standards & maintenance documentation, including Tank Maintenance Guide, General Practice guidelines, & Equipment Degradation Documentation used across ExxonMobil operations
- Supported engineering work on major refinery units including Fluidized Catalytic Cracking (FCC) catalyst transfer systems, Flexicoking gasifier preliminary design, heat exchanger mechanical analysis, reactor nozzle stress evaluation, & piping system integrity reviews

National Cadet Corps Singapore

Company Sergeant Major (CSM), Rank: Master Sergeant
February 2006 - July 2009 (3 years 6 months)

Singapore

- Awarded , a national recognition granted to the for leadership, discipline, and performance.
- (), overseeing training coordination, operational planning, and leadership development.
- , becoming the of the unit's history to reach this distinction, resulting in increased institutional support and funding from the Singapore Armed Forces.
- %, strengthening the organization's growth and long term sustainability.
- including the People's Association Youth Movement (PAYM) to organize community service initiatives and charitable outreach programs.
- Coordinated and executed covering weapons handling and marksmanship, jungle survival, land navigation and reconnaissance, camouflage and concealment, endurance conditioning, and expedition training aimed at developing discipline, resilience, and tactical decision making.

Education

Queen Mary, U. of London

Bachelor of Engineering with Honors (BEng with Hons), Aerospace Engineering · (September 2012 - September 2015)

Academia School Dhaka

'A'-Levels, Physics, Mathematics, Further mathematics · (2010 - 2012)

Deyi Secondary School (Singapore)

Cambridge 'O'-Levels · (2006 - 2009)
